Previsesystems Secures Funding from Switzerland's Technology Fund

Zug, March 19, 2025. Previsesystems, a provider of ETRM software solutions, is pleased to announce it has received funding from Switzerland's Technology Fund.

The Swiss Technology Fund provides loan guarantees to Swiss companies whose novel products contribute to a sustainable reduction in greenhouse gas emissions. This funding will strengthen Previsesystems' software and automation capabilities, helping clients manage the growing complexities of renewable energy markets.

"The support from the Technology Fund enables us to further advance and market technical innovations in the dynamic energy trading market. With the growing importance of renewable energy, powerful software and efficient process automation are essential for our customers to secure profitability and compete successfully."

Asbjørn Hansen, CEO, Previsesystems

About ETRM Software

ETRM (Energy Trading and Risk Management) software is a specialized type of enterprise software used by companies involved in the trading, procurement, and risk management of energy commodities such as electricity, natural gas, and renewables. It helps organizations manage complex trading operations, track market positions, assess financial risks, and ensure regulatory compliance.

About the Technology Fund

The Technology Fund is a political instrument of the Swiss government's climate strategy. The Climate Division of the Swiss Federal Office for the Environment FOEN is responsible for its strategic governance. By providing financial backing to companies advancing innovative climate solutions, the fund fosters the development of technologies that contribute to the reduction of greenhouse gas emissions and promote sustainability.

About Previsesystems

At Previsesystems, we fundamentally reshape the way Energy Trading and Risk Management (ETRM) software is designed, implemented and operated. We offer a highly performant SaaS solution for European electricity, natural gas and certificates trading – combining modern software architecture with the latest available tools and technology.

As a conceptual innovation, we build on the notion of "community", with an infrastructure for energy companies to leverage synergies through collaboration in the IT domain. The goal of this is simple: better software, faster and at lower cost. We create software without any legacy burden. Our data structure follows accepted market standards, which drives easy and fast data migrations, and is also a core factor of strong system performance.

With Previsesystems, energy companies are well equipped to master the challenges of a fast-evolving environment.
